Lindab Profiled Sheeting

Upgrade appearance,
downsize costs

Create your own profile

Give your building an attractive exterior without exceeding your budget. Lindab offers a wide range of cost-effective, profiled steel sheeting in many colours. An extensive selection of high and low profiles gives you the opportunity to design in complete accordance with your needs.

Due to its strength and durability Lindab's profiled sheeting is the ideal building material for roofs, facades and partition walls. It can be used on anything from hypermarkets and industrial premises to barns and stables. It's also ideal for small residential buildings like single-family houses and for carports too.

Lindab's profiled sheeting in a nutshell

- many colours and profiles
- solid, rustproof and long-lasting
- no risk of colours fading
- anti-condensation
- perforation for noise reduction
- software programs
- durability guaranteed

Watertight solutions for a sound environment

Lindab's profiled sheeting has a core of hot-dip galvanized steel to prevent corrosion. You can choose from two PVC-free polyester surfaces depending on where and for what purpose the sheeting is going to be used.

Perforation for sound insulation

Lindab's solution for noise reduction is as simple as it is clever. The trick is to make holes in the roofing or cladding in just the right places. All our profiled sheeting can be perforated to meet your requirements for quieter premises.

Protection against condensation

Condensation can be a problem in uninsulated buildings. But not when you choose Lindab's profiled sheeting. Our roofing and cladding can be fitted with anti-condensation solutions to keep your roofs and walls dry.

It's no wonder steel has great advantages

Cutting costs, time is money, durability – those are today's buzzwords. Using steel as in Lindab's profiled sheeting ensures that your new roof, facade or wall is economical and long-lasting, without compromising on function or good looks.

Low weight

Profiled sheeting is a lightweight material. One of its many advantages is that it can be used on weaker constructions. Its low weight also makes it an obvious choice for large roofs, extensive facades and high walls.

Easy to assemble and mount

You can order our profiled sheeting in lengths cut specially to your requirements. That means that assembly and mounting can be done quickly. Our specially designed fasteners and the complete range of flashings simplify assembly even further.

Durability guaranteed

We provide a generous warranty for all profiled sheeting. And you'll have certification that the roof, facade or wall will do what it's supposed to, for many years to come. For further information, contact your local dealer.

Different solutions for different purposes

Flashings

Lindab offers an array of flashings to give your building that finishing touch.

Fasteners

Lindab's fasteners have been specially designed to simplify and match any design. They come in a variety of colours, or rustproof for extra durability. The fasteners can be used for any material combination.

Anti-condensation

NonDrip is a coating that can be applied onto the underside of our profiled sheetting. It absorbs condensation up to 300g/m². We also offer a fiber cloth, NoConDrop, which is glued onto the underside. It absorbs up to 200g/m².

Several layers for durability

Lindab's profiled sheetting is built up with layers of passivation, primer and polyester on hot-dip galvanized steel. The underside is coated with specially strengthened lacquer. All coatings are PVC-free.

Thermo roofing and walls

Slotted profiles minimize cold bridges and require lighter insulation than usual. Our softwares include a complete range of profiled sheetting and steel profiles. The softwares calculate and optimize the best solution for your roof and wall designs.

A variety of profiles

The range includes:

- an extensive range of high and low profiles
- type approved profiles
- matte or gloss polyester or HB polyester coatings for various stress applications
- 21 colour coatings
- acoustic panels for noise reduction
- profiles with anti-condensation coating

Strong coatings in a wide range of colours

The polyester coating in matte or gloss finish reduces the risk of colours fading. The HB polyester coating is an advanced combination of thicker layers and extra-tough grains to resist scratches and general wear and tear.

The colour chart may be subject to changes.
